

# RegAlign® Sample Pack

What's in this pack and how to read it

Tenant	Northwind Fiduciary (Jersey) [SANDBOX]
Period	Generated FY2026
Generated	Reproducible from live sandbox data
Classification	DEMONSTRATION COLLATERAL

SAMPLE

This artefact is generated by the RegAlign® platform from a sandbox tenant (Northwind Fiduciary [SANDBOX]) populated with synthetic data for demonstration purposes. It is structurally identical to artefacts produced for live tenants.

# How to read this pack

These eight artefacts are produced by the RegAlign® platform from a sandbox tenant (Northwind Fiduciary [SANDBOX]) populated with synthetic but realistic data. They are structurally identical to the artefacts a paying tenant would produce. Read them in this order:

#	Artefact	Read it to understand...
08	Methodology	The end-to-end spine and the JFSC mapping.
02	Compliance Risk Assessment	How the firm scores residual risk by domain.
03	Business Risk Assessment	The firm-level inherent risk position.
01	Compliance Monitoring Programme	How monitoring is risk-calibrated and evidenced.
04	Board Pack	What the Board sees, generated not assembled.
05	Regulator Pack	What the JFSC receives on a visit.
06	Breach Register	How breaches are tracked and notified.
07	Audit Trail Extract	Why the chain is the defensibility story.

## Important

- All data is synthetic. Northwind Fiduciary is not a real firm.
- All artefacts carry a SAMPLE watermark and a footer attribution.
- Live tenants produce these artefacts without watermarks, with their own data, and with full audit-chain verification.
- Per-module sales (e.g. CMP-only, CRA-only) are not currently offered. The platform is sold as a single end-to-end spine.

## Next step

Apply for the 90-day pilot at [regalign.app/samples](https://regalign.app/samples) or request a 10-minute demo of the live platform. The demo shows the public verify endpoint returning `{ ok: true }` on a real decision in front of the buyer.
